

Windows

Prerequisites:

- **Quest 2** VR headset
- One of the two following connection methods:
 - A **USB 3.2** cable that is either a **USB-C** cable or a **USB-C to USB-A** cable depending on the ports available on your computer.
 - A Dedicated **5Ghz Wi-Fi 6** router connected via ethernet to the computer.
- **Windows** computer with a dedicated graphics card that meets the [Minimum Requirements](#).

Setup:

1. Unzip the Windows build of Cyber Security Park at the desired location.
2. Install [Meta Quest Link](#)
3. If using a USB cable connect the Quest 2 to your PC.
4. Open the Universal Menu on your Quest 2 by selecting the **Meta**  Or **Oculus**  button on your Quest 2 right controller.
5. On the Universal Menu, select **Settings**, with the Gear Icon at the bottom right of the Universal Menu to open the Settings page.
6. On the Settings Page select **System** to open the System Page.
7. On the System Page select **Quest Link** from the left sidebar.
8. If using a **router**:
 - a. Toggle **Airlink** on to switch from USB connection to Wi-Fi connection. Followed by the following steps.
 - b. Select **your PC** from the list of available PCs.
 - c. Select **Pair** to start the pairing process.
 - d. A pairing code will be displayed on the Quest 2.
 - e. Remove the Quest 2 headset to view your PC.
 - f. Ensure that the code matches the one displayed in the popup from the Meta Quest Link application.
 - g. Select **Confirm** on the Meta Quest Link pairing code popup to complete the pairing process.
 - h. On the Quest 2 select **Launch** to open the Oculus Link Quest 2 Application which will connect to the Meta Quest Link Windows Application.

9. If using a USB cable:
 - a. Select your PC from the list of available PCs.
 - b. Select **Launch** to open the Oculus Link Quest 2 Application which will connect to the Meta Quest Link Windows Application.
10. (Optional, but recommended) Check the connection of the USB port in the Meta Quest Link application by selecting **Devices**, then **Quest 2 and Touch**, and finally selecting **USB Test**.
11. Launch the Cyber Security Park.exe from the unzipped install folder

Android

Prerequisites:

- **Quest 2** VR headset
- A **USB** cable capable of **data transfer** that is either a **USB-C** cable or a **USB-C to USB-A** cable depending on the ports available on your computer.
- A **Windows, MACOS, or Linux** computer.

Setup:

1. Unzip the Android build of Cyber Security Park at the desired location.
2. Install [SideQuestVR](#) using the advanced installer.
 - a. Use the following [Video Guide](#) provided by SideQuestVR to complete the installation process.
 - b. Launch the SideQuestVR Application.
 - c. In the top Right corner of the SideQuestVR application select **the  icon** with the tooltip “Install APK file from folder on computer.” To launch the APK Open File Dialog.
 - d. Navigate to the unzipped android install and select the **csp.apk** file.
 - e. Select **Open** from the Open File Dialog.
 - f. Wait for the install to be completed.
 - g. Disconnect the **Quest 2** from the computer.
 - h. On the Quest 2 select the **Apps icon** in the bottom right corner of the Universal menu to open the Apps page.
 - i. On the apps page select the **dropdown menu** in the top right corner which will open a list of available sources.
 - j. From the dropdown list of available sources select the bottom option **Unknown Sources**.
 - k. From the list of unknown sources select **Cyber Security Park** to launch the game.
